

Alternative Evaluation of Treatment Technologies Meeting Summary - June 11, 2008

The LWG met with EPA on June 11 to discuss the path forward for the Alternative Evaluation of Treatment Technologies. A summary of meeting agreements and path forward are included below.

- EPA/LWG agreed that LWG will conduct an “initial” limited market survey as a separate technical memo
- This technical memo would appear in the Alternatives Screening Report
- It was recognized that there are barriers to beneficial reuse including needed size of any such operation and availability of upland sites
- Regarding ability to define and evaluate regional treatment options
 - It was recognized that “regional” needs to be defined (how far away would one look)
 - EPA agreed that it is largely a government role to define and create such regional initiatives
 - LWG indicated that this was not something they are able to do
- It was agreed that rather than providing the LWG proposed AETT document, LWG would provide a revised summary ranking table similar to the one in the last deliverable, but updated per EPA comments and EPA/LWG agreements
 - This table will document what technologies will be carried into the FS and why.

LWG Action Items

- LWG will prepare a scope describing the initial market survey document contents
- LWG will prepare a scope describing the revised treatment technology summary table, including limitations to the evaluation
